

## Breathing in the Blues: An In-Depth Analysis of Tamil Nadu's Air Quality

Breathing  
in the Blues

## About the project

**Tamil Nadu's** air quality is a matter of concern. This presentation will explore the root causes of air pollution and suggest measures to tackle the issue.

A photograph of an industrial facility with a tall smokestack emitting a thick plume of white smoke that rises into the sky. The smoke is dense and billowing, partially obscuring the blue sky. In the foreground, there are various industrial structures, including cranes and scaffolding, though they are somewhat out of focus. The overall scene depicts a significant source of air pollution.

Air pollution is a major health hazard. **Industrialization, vehicular emissions** and deforestation are the primary contributors to air pollution in Tamil Nadu.

# Defining a target

Air pollution causes a range of health problems, from respiratory illnesses to cancer. Children and the elderly are particularly vulnerable to its effects.

Aquarius is one of the oldest constellations. Its name means “water bearer,” and its symbol is a representation of water.

**2.** Capricornus is the smallest constellation in the zodiac. Its name means “horned goat” and is represented by a goat with a fishtail.

**3.** Aries is one of the zodiac constellations, and its symbol represents the ram’s horns. It’s unique because its image has changed over time.

**4.** Cassiopeia is a constellation in the northern sky. It is easily recognizable due to its distinctive ‘W’ shape, formed by five bright stars.

The government and citizens of Tamil Nadu must take steps to reduce air pollution. **Switching to renewable energy**, promoting public transport and planting trees are some of the ways to tackle the issue.

## Where we are

Air pollution is a serious issue that requires urgent attention. By taking collective action, we can ensure that Tamil Nadu's air quality improves and its citizens can breathe easy.

**Thanks!**
